Metric R4 Flow

Fibre-reinforced pourable mortar with compensated shrinkage for reinforced concrete structural repair.

Metric R4 Flow is a class R4 mortar with high mechanical resistance for the repairing and consolidating of reinforced concrete structures by formwork pouring or on horizontal surfaces.

- 1. Pourable, class R4
- 2. Thicknesses from 10 to 100 mm in a single coat
- 3. For structural layered repairs of reinforced concrete
- 4. Extremely fluid
- 5. Applicable with a machine

Rating 4

- ✓ Regional Mineral ≥ 60%
- \times Recycled Regional Mineral $\geq 30\%$
- \checkmark CO₂ Emission \leq 250 g/kg
- ✓ VOC Low Emission
- Recyclable

kerakoll

Areas of application

- → Use
 - Repair and structural consolidation of weakened reinforced concrete and prestressed reinforced concrete elements of any nature and size:
 - by the formwork casting of concrete for vertical structures and at the soffit of horizontal elements;
- by pouring onto the top surface of horizontal elements or by bonded section underpinning in general.

Repairs of concrete floors. Filling of rigid joints.

Instructions for use

→ Preparation of substrates

Before applying Metric R4 Flow it is necessary to:

- thoroughly remove all weakened concrete until a solid, resistant substrate is obtained; roughen it by mechanical scarification or hydrodemolition to a depth of ≥ 5 mm, equivalent to level 9 of the Test kit for preparation of reinforced concrete and masonry substrates;
- remove the rust from the reinforcing bars, which must be cleaned by brushing (manual or mechanical) or sandblasting;
- clean the treated substrate using compressed air or a high pressure washer;
- saturate with water until the substrate is saturated yet with no excess water on the surface. Alternatively on horizontal concrete surfaces, apply Geolite Base on a dry substrate in order to ensure regular absorption and promote the natural crystallisation of the geomortar.

Check that the resistance class of the supporting concrete is suitable.

In case of thick patched layers and on large surface areas, provide a reinforcing welded mesh anchored to the substrate.

 \rightarrow Preparation

Prepare Metric R4 Flow by mixing the powder using the amount of water indicated on the packaging (we advise using the whole bag). The mixture can be prepared in:

- a mixer, mixing until a smooth, lump-free mortar is obtained;
- a suitable mixing pump;
- a mortar mixer or drill-type mixing device with a low-rev agitator.
- \rightarrow Application
 - Treat the reinforcing bars with Metric Rebar before applying Metric R4 Flow.

- For repair and/or reinforcement, apply the mortar by pouring or pumping it on the extrados of horizontal surfaces or in sealed and formworks treated with parting compound that assists air escape, using the correct application techniques. Application thicknesses shall not be less than 10 mm. For applications, both horizontal and vertical, involving a thickness of more than 60-100 mm (according to the type of work to be carried out and the size of the intervention), in order to contain hydration heat, mix up a fine grain concrete, adding Ghiaia 3.6 gravel in a ratio of 25-40% by weight of the powder (25-40 kg of Ghiaia 3.6 for every 100 kg of Metric R4 Flow), so that the grain size curve is optimised according to the application thickness.
- Do not subject the casting to vibration. To facilitate the passage of mortar in difficult situations use wooden elements or steel reinforcing rods.
- Mechanical application: it is recommended to use a piston plastering machine or an endless screw plastering machine (such as Turbosol, Putzmeister, PFT, Bunker, Imer) or a threephase continuous pump mixer (such as PFT G4) equipped with the following accessories: mixer, stator/rotor D 6-3 (flow rate 22 l/min), Ø 25 mm flexible hose, 10-15 m long and spray gun.
- Metric R4 Flow must be integrated to the structure to be restored by embedding the existing reinforcing rods, after freeing them from the concrete, or by inserting additional reinforcement in the form of rods or electrowelded mesh.

Allow to cure during the first 24 hrs.

\rightarrow Cleaning

Residual traces of Metric R4 Flow can be removed from tools and machines using water before the product hardens.

Abstract

Supply and laying of a fibre-reinforced pourable mortar with compensated shrinkage, such as Metric R4 Flow by Kerakoll, for localised or generalised centimetre-thick structural repair of reinforced concrete in damaged or deteriorated sections reconstruction of concrete floors, by applying by hand or machine casting into formworks or on horizontal surfaces, after adequate preparation and wetting of the substrates until fully saturated. GreenBuilding Rating 4, CE-marked and compliant with the performance requirements of Standard EN 1504-3, Class R4, type CC and PCC, for volumetric reconstruction; according to Principles as defined by Standard EN 1504-9. For applications, both horizontal and vertical, involving a thickness of more than 60-100 mm (according to the type of work to be carried out and the size of the intervention), mix up a fine grain concrete adding gravel, such as Ghiaia 3.6 by Kerakoll, in a ratio of 25-40% by weight of the mortar.

Technical Data compliant with Kerak	ton Quality Standard		
Appearance	Powder		
Apparent volumetric mass	≈ 1380 kg/m ³	UEAtc	
Aggregate mineral content	silicate - carbonate		
Grading	0 – 2.5 mm	EN 12192-1	
Shelf life	\approx 12 months from production in the original sealed packaging, protect from humidity		
Pack	25 kg bags		
Mixing water	≈ 3.8 l / 1 x 25 kg bag		
Flow of the mixture	280 - 300 mm with no shaker table vibration	EN 13395-	
Density of the mixture	$\approx 2270 \text{ kg/m}^3$		
pH of the mixture	≥ 12,5		
Pot life	> 1 hr		
Temperature range for application	from +5 °C to +35 °C		
Minimum thickness	10 mm		
Maximum thickness per layer	60 - 100 mm (according to the type of work and operation)	the size of the	
	For thicker layers, mix with Ghiaia 3.6 gravel		
Coverage	$\approx 20 \text{ kg/m}^2 \text{ per cm of thickness}$		

Values taken at +21 °C, 60% R.H. and no ventilation. Data may vary depending on specific conditions at the building site.

Warning

- \rightarrow Product for professional use
- \rightarrow abide by any standards and national regulations
- \rightarrow use at temperatures between +5 °C and +35 °C
- \rightarrow do not add binders or additives to the mixture
- \rightarrow do not apply to dirty, loose and flaking surfaces
- \rightarrow do not apply on gypsum, metal or wood
- \rightarrow following application, protect from direct sunlight and wind
- \rightarrow allow the product to cure during the first 24 hours
- \rightarrow if necessary, ask for the safety data sheet
- → for any other issues, contact the Kerakoll Worldwide Global Service +39 0536 811 516 globalservice@kerakoll.com
